

"*eConscience - Art of Soundscape*" is a no-profit organization born in early 2017 and based in Italy. Our team is composed by three young scientists in the field of bio and eco-acoustics and a sound designer with a strong interest in recording natural soundscapes, linking scientific knowledge and artistic exploration.

Our mission is focused on spreading environmental concepts derived by soundscape analysis. Our main goal is to improve the "ecological conscience" of public opinion, using a mixture of science and art, with impacts on social attitudes. Soundscape is a powerful tool in scientific investigations for environmental monitoring, and listening nature has an inestimable communicative and cultural value.

The organization promotes the conservation and restoration of marine and terrestrial ecosystems, with four main fields of action:

**Dissemination:** giving out scientific results to the social communities, with particular interest on soundscape analysis and bioacoustics for ecological applications.

**Education:** organizing multidisciplinary courses in collaboration with schools and private institutions and promoting information meetings on the impact of anthropogenic activities on natural ecosystems.

**Environment:** safeguarding of natural heritage through activities as technical-scientific consultants, generally operating in acoustic applications.

**Art and Multimedia:** developing interactive spaces for «active learning» by using innovative tools to generate marine and terrestrial soundscapes and planning cultural and artistic events.
